Alessandro Gorla

DevOps / Infrastructure Engineer

ale.gorla2002@gmail.com · Abbiategrasso (MI) · github.com/gorlix · linkedin.com/in/gorla-alessandro

PROFILE

Infrastructure/DevOps engineer with a solid Linux background (personal operating system for 5 years) and a multi-node homelab managed entirely as code (Proxmox, OpenTofu, Ansible, Docker, Traefik). I build and maintain secure self-hosted infrastructure (reverse proxy, zero trust, tested backups) and end-to-end CI/CD pipelines. Full-stack development and LLM integration are a plus that I use to automate and instrument the systems I manage.

EXPERIENCE

Full-stack Engineer · Trimind 04/2026 – Present

Assessment platform with AI-generated reports · freelance engagement, sole technical and infrastructure lead · client renewed

• **Infrastructure:** over 20 Docker Compose services on a VPS with no public ports exposed, reachable only through Cloudflare Tunnel + Zero Trust.

• **Backup and compliance:** backups on Cloudflare R2 with 15-day retention (consistent with the GDPR Art. 17 right to erasure) and a documented, tested restore procedure.

• **CI/CD and automation:** pipelines on self-hosted GitLab (own runner) across 4 repositories, blue-green releases; n8n workflows versioned as code in the repo.

• **Observability:** Prometheus, Grafana, Loki and Alertmanager stack for service monitoring and alerting.

• **Multi-provider:** pipeline that sends the same task to several LLM providers (Anthropic, OpenAI, Google) to compare the quality, cost and latency of each call, with the data stored for cost monitoring.

• **Quality:** about 490 automated tests covering the calculation engine and the pipeline.

• **Application:** deterministic scoring engine in Python (migrated from n8n), split into independent stages so that the algorithm of each score is versioned separately; the narrative part of the reports is handled by Claude on anonymized data.

IT Delegate · Rotaract District 2050 (volunteer) 01/2026 – Present

• Responsible for the IT infrastructure and websites of the District and the Multidistrict.

• Automated build and deploy pipelines via GitHub Actions for both sites.

• Independent management of hosting, DNS and maintenance, with no dedicated IT team.

INFRASTRUCTURE / HOMELAB

Homelab as code — 3 Proxmox nodes across 2 sites — github.com/gorlix/homelab: VM provisioning with OpenTofu, configuration with Ansible, services in Docker Compose behind a Traefik reverse proxy, centralized SSO with Authentik, automatic updates with Renovate, 3-2-1 backup strategy. Architecture decisions documented in 8 ADRs. Hands-on, ongoing proof of the same skills used in production for Trimind.

PROJECTS

• **Contribution to Paca (GitHub Actions):** pull request accepted and released in v0.15.0 of the open source project management project with AI agents (1.8k stars on GitHub), with smoke tests in CI; GitLab integration plugin published alongside it. github.com/Paca-AI/paca/pull/454

• **claude-chat-verticali:** Claude Code plugin that splits long chats into “verticals” dedicated to a single task, with automatic handoff between sessions; born from studying how agent loops work. github.com/gorlix/claude-chat-verticali

• **claude-multi-view:** plugin that monitors and coordinates multiple chats and sub-agents in tmux (status, usage limits, active tasks, notifications); a multi-agent approach to managing parallel sessions. github.com/gorlix/claude-multi-view

• **Email bot with local LLM (Gemma 3 4B):** experiment, for the family business, with a locally hosted open-weight model to automate email handling and provide a limited interface to the IBM iSeries (formerly AS/400) management system. Unsloth inference engine, chosen for its fast model fine-tuning; the project is still highly experimental.

SKILLS

Infrastructure and DevOps: Systems: Linux, Bash · **Containers:** Docker, Docker Compose · **IaC/config:** OpenTofu/Terraform, Ansible · **Virtualization:** Proxmox

Network/security: Traefik, Cloudflare Tunnel/Zero Trust, Authentik SSO · **CI/CD:** GitHub Actions, GitLab CI (self-hosted runner), Renovate · **Observability:** Prometheus, Grafana, Loki, Alertmanager

Development: Python, TypeScript, SQL/PostgreSQL, API integration (Claude API, REST)

Certifications in progress: RHCSA (Red Hat Certified System Administrator) · CKA (Certified Kubernetes Administrator) — Kubernetes in study, not yet in production

EDUCATION

Politecnico di Milano – Computer Engineering · 2023 – paused (for work)

ITIS Alessandrini Mainardi – Technical diploma in computer science · 2022

VOLUNTEERING

Rotaract Club Abbiategrasso: several offices, including Secretary and Sergeant-at-Arms.

Civil Protection (Protezione Civile): hydrogeological response, high-risk firefighting (level 3), AED, A1/A3 drone pilot.

LANGUAGES

Italian native · English fluent
